The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Feed Grade Antioxidant BHT competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Antioxidant BHT is an excellent universal phenolic antioxidant that is non-toxic, non flammable, non corrosive, and has good storage stability. It can inhibit or delay the oxidative degradation of plastics or rubber, thereby extending its service life. Feed grade antioxidant BHT is mainly used in full price compound feed, vitamin premix and concentrated feed, feed composite antioxidant, single feed, raw materials such as fish meal, fish oil, meat and bone meal, fat or fat mixture, etc. It can slow down the oxidation and decomposition of nutrients in feed, play a role in anti-corrosion and quality preservation. In 2024, global Feed Grade Antioxidant BHT production reached approximately 35269 MT , with an average global market price of around US\$ 3856 per MT. The annual production capacity of a single production line is about 5000 tons, with a gross profit margin of about 15%. Among all the solutions to prevent feed oxidation and spoilage, antioxidant BHT has the lowest cost. Its antioxidant effect has been validated for decades, with mature technology and easy use. It can effectively extend the shelf life of feed, protect vitamin activity, and meet the basic growth needs of animals. With technological progress and cost reduction, natural antioxidants are gradually penetrating from special aquatic feed and livestock feed to ordinary livestock and poultry feed.

The global Feed Grade Antioxidant BHT market size was estimated at USD 136.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
