Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Feed Grade Basic Copper Chloride competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Basic copper chloride has the advantages of non hygroscopicity, non caking, good fluidity, non oxidative damage to fats and vitamins in feed, and high bioavailability, greatly reducing the pollution of copper excretion to the environment. It is of great significance for protecting the ecological environment and has obvious high biological efficacy and safety. Moreover, the amount of copper used is about 25% to 30% lower than that of feed grade copper sulfate, which can reduce feed and feeding costs. Therefore, basic copper chloride will be a good copper source, which can replace copper sulfate to a certain extent and overcome the disadvantages of copper sulfate in use. Alkali copper is used as a copper source feed additive in the breeding fields of pigs, poultry, cows, beef cattle, horses, aquatic products, and pets. It has the characteristics of being insoluble in water and easy to be absorbed by the animal digestive tract. Alkali copper has high stability and is not prone to chemical reactions with other sensitive substances in premix or feed, thus avoiding waste. Due to its excellent bioavailability, alkaline copper products are currently ideal copper source feed additives. In 2024, global Feed Grade Basic Copper Chloride production reached approximately 77.10MT, with an average global market price of around US\$ 5694 per MT. The annual production capacity of a single production line is 5000 tons, with a gross profit margin of around 20%. Upstream basic raw materials: copper mining; Sulfuric acid/hydrochloric acid; Liquid alkali/pure alkali; Downstream applications: feed premix enterprises, full price feed production enterprises. Ultimately used for livestock/aquatic animals.

The global Feed Grade Basic Copper Chloride market size was estimated at USD 439.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
