Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Feed Grade Chromium Propionate competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Chromium propionate is a dark green powder solid with good thermal stability, catalytic activity, and coordination properties. It is stable at room temperature, easily soluble in water and various organic solvents, and widely used in many fine chemical fields such as pharmaceutical synthesis, metal complex dyes, catalysts, additives, resin crosslinking agents, etc. In recent years, with the increasing demand in functional polymer materials, nutritional supplements, environmentally friendly coatings and other fields, the industrial chain of chromium propionate has been continuously extended, and its market position has also risen. Chromium propionate, as a novel organic chromium source, has significant advantages in its application in feed. Compared with traditional inorganic chromium, chromium propionate has stronger bioavailability and can be more effectively absorbed by animals, thereby improving its health and production performance. At the same time, chromium propionate has a relatively small impact on the environment, which meets the requirements of current environmental protection and sustainable development.

The global Feed Grade Chromium Propionate market size was estimated at USD 94.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
