Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Feed Grade Potassium Chloride competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Feed grade potassium chloride is a potassium source primarily used in animal feed, with the chemical formula KCl. It is an inorganic salt widely used in the feed formula of various livestock such as poultry, pigs, cows, sheep, etc., to help supplement the potassium element needed by animals to promote their normal growth and health. Potassium chloride is commonly used for electrolyte balance regulation. It can maintain the acid-base balance of blood and tissue fluids, regulate the stability of normal osmotic pressure, stimulate saliva secretion, and promote the appetite of poultry and livestock. It can ensure the normal operation of cellular metabolism in the body, thereby enhancing the body's immunity and stress resistance, and improving the production performance of animal husbandry. Animals are prone to neuroendocrine disorders, electrolyte imbalances in body fluids, and acid-base imbalances in response to high temperatures, immunity, childbirth, and other major stress states. Potassium ions can maintain the body's ion balance, stabilize intracellular and extracellular osmotic pressure, and regulate the acid-base balance of body fluids. In 2024, global Feed Grade Potassium Chloride production reached approximately 408 K MT, with an average global market price of around US\$ 458 per MT. The annual production capacity of a mainstream single production line is usually around 5000 tons. Upstream: The core is potassium salt mining enterprises. Midstream: Processing and value-added links. The technical barriers are not high, mainly in purification, crushing, mixing, and packaging. The core barriers lie in the production qualifications of feed additives (such as FAMI-QS certification), stable raw material supply, and cost control. Downstream: Stable and rigid demand. Mainly used as animal feed and a supplementary source of potassium, it is

directly positively correlated with the global scale of animal husbandry.

The global Feed Grade Potassium Chloride market size was estimated at USD 187.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
