Report Overview:

Vitamin A is a group of unsaturated nutritional organic compounds that includes retinol, retinal, retinoic acid, and several proVitamin A carotenoids (most notably beta-carotene). Vitamin A has multiple functions: it is important for growth and development, for the maintenance of the immune system and good vision. Vitamin A is needed by the retina of the eye in the form of retinal, which combines with protein opsin to form rhodopsin, the light-absorbing molecule necessary for both low-light (scotopic vision) and color vision. Vitamin A also functions in a very different role as retinoic acid (an irreversibly oxidized form of retinol), which is an important hormone-like growth factor for epithelial and other cells. Vitamin A chemical called retinol is the earliest discovered vitamin. Vitamin A contains two. One is Vitamin A alcohol (retinol), was the first Vitamin A morphology (found only in animal foods); The other is carotene, Vitamin A can be synthesized in the human body (provitaminA, preformed material from plant and animal foods intake); Vitamin A unit of measure is USP units (United States Pharmacopeia), IU units (International Units), RE (Retinol Equivalents).

The Global Feed Grade Vitamin A Market Size was estimated at USD 2232.83 million in 2023 and is projected to reach USD 3407.64 million by 2029, exhibiting a CAGR of 7.30% during the forecast period.
