Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Feed Mill competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A feed mill is a complete set of mechanical and technological equipment used in animal feed production lines to crush, mix, condition, granulate, cool, screen, and package raw materials. Typical components include a crusher (hammer mill/roller mill), mixer, conditioner, pellet mill (ring die/flat die), cooler, granulator, screening and conveying/dust removal system, and electrical control and process monitoring. Standardized processes improve the nutritional uniformity, palatability, and digestibility of feed, significantly increasing breeding efficiency and reducing feeding costs; simultaneously, automation and process control reduce energy consumption and dust, improving safety and compliance. Mainstream market types cover hammer mills, roller mills, pelleting and flaking units, and integrated production lines. The average price of this product is approximately US\$50,000, with global sales of approximately 19,000 units. The upstream sector includes steel and motors/gear reducers, steam boilers and pneumatic components, screens and ring dies (ring die aperture 1.2-12 mm, material stainless steel/alloy steel), and formulation raw materials (grains/oilseed meal/additives); the midstream sector consists of automated production lines for crushing, mixing, conditioning, granulation, cooling, screening, and packaging (single line 1-20+ tons/hour, steam 3-8% conditioning, target PUE energy efficiency and energy consumption per ton 50-120 kWh); the downstream sector targets poultry, livestock, aquatic, and pet feed companies. The global market size is estimated by several research institutions to be in the range of approximately US\$900 million-1.1 billion, with a CAGR of approximately 3.3-3.5% from 2024 to 2031, driven by factors such as large-scale farming, functional formulations, and automation upgrades;

meanwhile, peripheral segments such as connected factories, batch tracking, and low-dust/low-energy equipment will become the focus of competition.

The global Feed Mill market size was estimated at USD 990.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
