## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on FEP Corrugated Pipe competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. FEP corrugated pipe is a tubular elastic sensitive element, which is composed of foldable corrugated sheets connected in a specific direction, exhibiting good stretchability. The design feature of corrugated pipes is that their walls are thin and light, therefore they have high sensitivity and can cover a wide measurement range from tens of pascals to tens of megapascals. During use, one end of the corrugated tube is fixed while the other end remains free, and its elasticity is enhanced by auxiliary coil springs or spring plates. When the inside of the corrugated pipe is subjected to pressure, it will elongate along the length direction of the pipe, causing the movable end to produce displacement proportional to the pressure it is subjected to. This displacement will then drive the pointer to move, directly indicating the magnitude of the measured pressure. However, due to the significant volume change required by the bellows during expansion, its response speed is slightly slower compared to the Bourdon tube, making the bellows more suitable for low-pressure measurement applications. In 2024, global PFA Corrugated Pipe production reached approximately 1658 K m, with an average global market price of around US\$ 41 per m. The production capacity of a single production line is 50 kilometers, and the gross profit margin is about 45%. Upstream raw materials: high purity FEP resin. Downstream applications: chemical industry; pharmaceutical industry; food and beverage. Direct material costs account for 40%-50%; labor costs account for 5%-10%; manufacturing expenses account for 45%-55%.

The global FEP Corrugated Pipe market size was estimated at USD 53.0 million in 2025

and is projected to grow at a compound annual growth rate (CAGR) of 7.10% during the forecast period.
