## Abstracts

Ferroelectric random access memory (FeRAM) is a nonvolatile memory, in which data are stored using hysteretic P-E (polarization vs. electric field) characteristics in a ferroelectric film. Ferroelectric random access memories (FeRAMs) are widely used in IC (integrated circuits) cards and RF (radio frequency) tags. Their features are (1) nonvolatile data storage (The stored data do not disappear even if electricity is turned off.), (2) the lowest power consumption among various semi-conductor memories, and (3) the operation speed as fast as that of DRAMs (dynamic RAMs). From the perspective of manufacturers, globally, the core FRAM memory manufacturers mainly include RAMXEED (formerly Fujitsu), Infineon (Cypress), Texas Instruments, ROHM (Lapis), and Sunming Memory, among others. In 2023, the top two global manufacturers were RAMXEED (formerly Fujitsu) and Infineon (Cypress), which together held approximately 90% of the market share. It is expected that in the coming years, with technological breakthroughs from emerging companies, more enterprises will enter the market, competing with existing manufacturers for market share through product differentiation and lower prices. In terms of product types, 4K-256K holds a significant position, with its market share expected to reach 68% by 2031. Medium and low-capacity memories, due to their high technological maturity, have been widely used in automotive electronics, instrumentation, industrial automation, and other fields. In the future, FRAM memory is expected to develop towards higher capacity and faster speeds, anticipating broader applications in more high-end markets. Regarding the market application of products, FRAM memory has shown strong growth potential in the automotive electronics and charging station markets. With the acceleration of automotive intelligence and electrification trends, the demand for high-speed, high-reliability, and low-power memory in the automotive market is increasingly growing. FRAM memory, with its unique advantages such as fast read/write speeds, low power consumption, and long data retention, has become one of the preferred choices in the

automotive field. Automotive electronics and charging stations occupy the most important position in the downstream applications of FRAM memory. The share of automotive electronics and charging stations was about 27% in 2024, with a CAGR of approximately 9.6% expected in the coming years. Additionally, the growth in demand from other downstream markets also provides a solid foundation for the prosperous development of the FRAM memory industry.

The global FeRAM market size was estimated at USD 1022.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.20% during the forecast period.
