Abstracts

Ferrite core grinder is a special grinding equipment, mainly used for high-precision grinding of ferrite cores. The ferrite core grinder adopts the principle of electrolytic grinder, and realizes precise grinding by controlling the trajectory and speed of the relative movement between the grinding wheel and the workpiece (i.e., ferrite core). The ferrite core grinder has high grinding accuracy and surface roughness control capabilities, which can ensure the dimensional accuracy and shape accuracy of the ferrite core and meet the requirements of high-precision electronic components. Ferrite core grinders are widely used in the processing and grinding of ferrite cores, and are an indispensable and important equipment in the manufacturing process of electronic components. As one of the important basic materials for electronic components, ferrite cores are widely used in transformers, inductors, power filters, electromagnetic relays and other fields. With the continuous development of emerging technologies such as large-scale integrated circuits and microwave integrated circuits, higher requirements are put forward for the processing accuracy and production efficiency of ferrite cores, and the importance of ferrite core grinders is becoming increasingly prominent.

The global Ferrite Core Grinder market size was estimated at USD 550.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.10% during the forecast period.
