Report Overview:

It is the fixed value inductors which have a ferrite core placed inside the coil are known as a ferrite core inductor. The air core inductors and iron core inductors have a low inductance value, limited frequency operation and more losses. By using ferrite core instead of iron core these problem can be overcome.

Mixing Iron oxide (Fe_2O_3) in combination with other metal oxides like (Mn), zinc(Zn) or magnesium(Mg) at a temperature of 1000°C - 1300°C will result in a material with very interesting magnetic properties called ferrite.

Ferrite core inductors have high permeability, high electrical resistivity and low eddy current losses these characteristics make them suitable for many high-frequency applications.

The Global Ferrite Core Inductor Market Size was estimated at USD 861.07 million in 2023 and is projected to reach USD 1228.37 million by 2029, exhibiting a CAGR of 6.10% during the forecast period.
