The formic acid vacuum reflow oven is a specialized equipment used for soldering in a vacuum environment. In addition to preventing oxidation and ensuring high-quality solder joints, the system also creates an oxygen-free environment during the soldering process. Vacuum soldering improves device reliability and performance. Formic acid solder reflow is a proven flux-free soldering method. It is also a very flexible process because the oxide removal properties of formic acid vapor are effective at lower temperatures. It eliminates the need to add flux before reflow or remove flux after reflow.
