Report Overview

Soft ferrite magnets are those that have a low coercivity. Coercivity is a measurement of a magnetic material's ability to withstand external magnetic forces without becoming demagnetized. Some magnetic materials are more susceptible to demagnetization when exposed to an external magnetic force than others. Soft magnets have a low coercivity, meaning they offer a low level of protection against demagnetization. Because of their low coercivity, soft ferrite magnets are commonly used in electrical applications.
