Report Overview

Ferritic stainless steel strip is a type of metal product that is made of ferritic stainless steel, which is a category of stainless steel alloy. Ferritic stainless steel is characterized by its high chromium content, typically ranging from 10.5% to 30%, which gives it remarkable resistance to corrosion in oxidizing environments. Unlike austenitic stainless steel, ferritic stainless steel is magnetic due to its crystalline microstructure. It generally contains low carbon content and lacks the nickel that characterizes austenitic grades. This renders it less ductile and less prone to work hardening, limiting its formability. Despite this, ferritic stainless steel offers advantages such as excellent corrosion resistance, good thermal conductivity, and relatively low thermal expansion. It finds applications in various industries, such as automotive, appliances, architecture, and industrial equipment.

The global Ferritic Stainless Steel Strip market size was estimated at USD 1170 million in 2023 and is projected to reach USD 2010.51 million by 2032, exhibiting a CAGR of 6.20% during the forecast period.

North America Ferritic Stainless Steel Strip market size was estimated at USD 338.13 million in 2023, at a CAGR of 5.31% during the forecast period of 2024 through 2032.
