The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Ferro Molybdenum Powder competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of ferro molybdenum powder is 6,792 tons, with an average selling price of US\$24 per kilogram. Ferro molybdenum powder is an alloy of iron and molybdenum, typically containing 60-75% molybdenum. It's produced by reducing molybdenum oxide with iron in an electric arc furnace or by aluminothermic reaction. The resulting alloy is then crushed and milled into a fine powder. This powder is primarily used as an additive in steelmaking to improve the steel's hardenability, strength, toughness, and corrosion resistance. It is crucial for producing high-strength low-alloy steels, stainless steels, and tool steels. The fine powder form allows for precise control of molybdenum content in the final steel product. The Ferro Molybdenum powder market is in a stage of steady development, driven by both the growth of global steel demand and technological progress. Upstream, companies continue to optimize production processes to improve purity, control particle size, and reduce environmental impact, with green metallurgical technology becoming a research and development focus. Downstream, driven by the automotive, aerospace, and construction industries, the demand for high-strength steel is accelerating the consumption of ferromolybdenum powder. Product specifications are increasingly evolving towards customization, emphasizing particle size refinement and chemical composition consistency to meet specific application scenarios. Regionally, China dominates production and consumption, while North America and Europe focus on high-end applications. With the expansion of infrastructure construction and the increasing demand for advanced materials from emerging technologies, the market size is expected to continue to grow. At the same time, leading companies are strengthening their control over the supply

chain through mergers and acquisitions and vertical integration, driving the industry towards high performance, environmental protection, and industrial concentration.

The global Ferro Molybdenum Powder market size was estimated at USD 163.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Ferro Molybdenum Powder market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
