Abstracts

Ferrous metal materials are a general term for iron, chromium and manganese in industry. Ferrous metal ore processing line refers to the process of extracting and refining ferrous metal ore to produce usable products. This process typically involves crushing and grinding the ore to separate the iron minerals from the gangue minerals, followed by various beneficiation techniques such as magnetic separation, flotation, and gravity separation to concentrate the ore. The concentrated ore is then smelted in a blast furnace to produce molten iron, which can be further processed into steel through various refining and casting processes. The ferrous metal ore processing line is essential for the production of a wide range of products, including construction materials, vehicles, machinery, and appliances.

The global Ferrous Metal Ore Processing Line market size was estimated at USD 2070.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 2.90% during the forecast period.
