Abstracts

A ferrule threaded joint is a mechanical connection method widely used in piping systems, fluid transfer applications, and structural assemblies, where it consists of a threaded fitting?such as a union, coupling, or adapter?that incorporates a ferrule, typically a ring or sleeve made of metal or polymer, designed to compress and form a tight seal around a tube or pipe when tightened. This configuration ensures leak-proof performance, resistance to vibration, and ease of assembly or disassembly, making it particularly suitable for high-pressure environments, hydraulic systems, instrumentation lines, and industries requiring reliable, reusable connections without welding or permanent fixes.

The global Ferrule Threaded Joint market size was estimated at USD 490.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
