### Report Overview:

Fertigation is a term derived from fertilization and irrigation. Fertigation is a slow application of fertilizers, soil amendments, and other water soluble products into an irrigation system to improve the process of crop yield. It is used to add additional nutrients or to fulfill nutrient deficiencies in the plant tissue. The fertigation applies the nutrients exactly and uniformly to the wetted root volume, where the active roots are concentrated, which increases the efficiency of the fertilizers. It is gaining popularity due to high crop yield and cost-effectiveness due to less labor involvement.

The Global Fertigation Market Size was estimated at USD 5401.33 million in 2023 and is projected to reach USD 7074.43 million by 2029, exhibiting a CAGR of 4.60% during the forecast period.
