Abstracts

Fertilizer and Pesticide belong to agrochemical products.The plants need nutrients to grow, which they consume from the soil through the plant’s roots. And fertilizers provide the major nutrients, whether they are organic or inorganic. Unless the requirement of nutrients fills up, the soil productivity and growing capacity will decrease with every harvesting. Basically, there are many types of agricultural fertilizers, but here we are showing the two types of fertilizers that include every kind of mineral fertilizer and natural fertilizer also. Pesticide is a chemical-based substance to repel, control, and kill animal life or plant life, known as pests. They include a range of biological agents such as disinfectants, antimicrobials, bacteria, and viruses to control agricultural pests that can damage crops and livestock. While pests can involve fungi, rodents, slugs, insects, weeds, snails, bird mites, etc.Global food security issues have become more prominent, and countries have paid more and more attention to the protection of their own food security. With the rise of global food prices and the improvement of agricultural prosperity, farmers' enthusiasm for planting is also increasing, which promotes the development of the global Fertilizer and Pesticide industry.High volatility in Fertilizer and Pesticide prices has raised concerns about future supply shortages, which could adversely affect food production and food security. Global key players of Fertilizer and Pesticide include BASF, Bayer, Syngenta and Yara International, etc. Global top four manufacturers hold a share over 20%. Europe is the largest producer of Fertilizer and Pesticide, followed by China.Key Points:In 2021, the Sri Lankan government suddenly banned the import of chemical fertilizers, and the use of fertilizers dropped sharply. But it led to a significant reduction in the country's food supply. Sri Lanka's rice production fell by nearly 40% from 2021 to 2022. The production of major export crops such as tea and rubber also fell sharply. The country fell into an economic crisis.The amount of pesticides used on Brazilian plantations already exceeds that of China and the United States combined.
