Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on FFKM Polymer and Compounds competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production of FFKM polymer and compounded rubber reached 1,324 tons, with an average selling price of \$1,635 per kilogram. Perfluorooctane (FFKM) is currently the most chemically and heat-resistant elastomer sealing material known, earning it the nickname "King of Elastomers." There are two types of companies in the FFKM market. One type, such as DuPont and Greene Tweed, produces its own raw rubber but ultimately sells FFKM seals and parts. Other companies, such as Solvay, Daikin, and AGC, market FFKM raw rubber. In China, the FFKM market has developed into a three-tiered market: primarily imported raw rubber, supplemented by domestically produced compounded rubber, and rapidly replaced by domestically produced seals.

The global FFKM Polymer and Compounds market size was estimated at USD 2165.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global FFKM Polymer and Compounds market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights. It examines market size, competitive landscape, emerging development trends, niche segments, key drivers and challenges, as well as conducts SWOT and value chain analyses.
