### Report Overview

Fiber Bragg grating temperature sensor is a sensor that uses the characteristics of fiber Bragg grating to measure temperature. Fiber grating is a structure with periodic refractive index changes formed in an optical fiber. It can selectively reflect or transmit incident light to form a narrow-band filter. When a fiber grating is affected by temperature changes, its reflection or transmission wavelength will also change accordingly. This wavelength change can be used to represent temperature changes. By measuring the wavelength change of the fiber grating, the temperature information can be obtained.

The global Fiber Bragg Grating Temperature Sensor market size was estimated at USD 185.65 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.45% during the forecast period.
