Abstracts

Fiber Desiccant Sheet are moisture-proof and mildew-proof products made from plant fibers through a special process. Fiber Desiccant Sheets use plant fibers as carriers, which are odorless, non-corrosive, chemically stable, and environmentally friendly. Their specially designed coating can prevent water from osmosis, avoiding the pollution problems that may arise after the desiccant is saturated with water, making them safer to use. In addition, fiber dryer sheets can be naturally degraded, which is in line with the concept of sustainable development. Fiber dryer sheets are not only suitable for daily food and medicine, but are also widely used in the storage of electronic materials, handicrafts, etc. and to control the relative humidity of the environment.

The global Fiber Desiccant Sheet market size was estimated at USD 206.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.20% during the forecast period.
