The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Fiber Optic Integrated Navigation System competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Fiber Optic Integrated Navigation System production reached approximately 4,800 units, with an average global market price of around US\$ 36,100 per unit. Fiber Optic Integrated Navigation System is a high-precision navigation and positioning solution that integrates a fiber optic gyroscope (FOG) with other navigation sensors, such as accelerometers, magnetometers, and Global Navigation Satellite System (GNSS) receivers. Based on the Sagnac effect, the fiber optic gyroscope provides accurate angular velocity measurements, which are combined with linear acceleration and external positioning data through advanced sensor fusion algorithms (e.g., Kalman filtering). This integration enables continuous, reliable navigation and attitude determination, even in GPS-denied environments or under harsh operational conditions.

The global Fiber Optic Integrated Navigation System market size was estimated at USD 173.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
