Report Overview

Fiber optic cables can be run underground, over aerial wires, and even beneath the oceans. They are exposed to some of the harshest environments such as rocky, dry, wet, snowy, dusty, cold, and hot. A splice closure is a small box made up of hardy plastic and covers the sensitive parts of the cable, protecting it from the external elements. Fiber optic splice closures play a crucial role in the strength of the fiber-optic network. Fiber optic splice enclosures are used to protect stripped fiber optic cable and fiber optic splices from the environment, and they are available for indoor as well as outdoor mounting. Outdoor fiber optic enclosures are usually weatherproof with watertight seals.
