Abstracts

Fiberglass rafting paddles are essential equipment designed specifically for navigating whitewater and recreational rafting, featuring a construction where the blade, shaft, and T-grip are primarily made from fiberglass—a material chosen for its favorable balance of durability, stiffness, and moderate weight. These paddles often incorporate additional reinforcements, such as carbon fiber or epoxy resin coatings, to enhance impact resistance against rocks and abrasion while maintaining sufficient flexibility to withstand the dynamic forces encountered in turbulent water conditions. The design typically includes a dihedral or spooned blade shape to improve efficiency and reduce turbulence during strokes, and the overall ergonomics prioritize user comfort and control during extended periods of use, making them a popular mid-tier option between heavier aluminum or plastic paddles and lighter, more expensive carbon fiber alternatives.

The global Fiberglass Rafting Paddles market size was estimated at USD 35.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.25% during the forecast period.
