The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Fiberglass Reinforced Panel competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Fiberglass Reinforced Panel (FRP) is a composite material made from a polymer resin matrix (polyester, vinyl ester, or epoxy) reinforced with fiberglass, producing strong, lightweight, corrosion-resistant panels widely used in construction, transportation, and industry. The supply chain begins with glass fiber production from melted silica sand and resin synthesis from petrochemicals, followed by midstream lamination or molding into panels with various finishes. After curing and trimming, panels are distributed for use in walls, ceilings, vehicles, marine, and industrial structures. In 2024, global FRP panel output was about 1.35 million tons, with 1.7 million tons of capacity. Unit prices range USD 3,200-6,800 per ton, and the average gross margin is 25 %, supported by steady multi-sector demand.

The global Fiberglass Reinforced Panel market size was estimated at USD 4759.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.40% during the forecast period.
