Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Fibre Grade Powder of Para-phenylene Terephthalamide competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Aramid fiber, the full name of which is "aromatic polyamide fiber", is a new type of high-tech synthetic fiber with excellent properties such as ultra-high strength, high modulus, high temperature resistance, acid and alkali resistance, and light weight. Aramid is mainly divided into two types, para-aramid fiber (PPTA) and meta-aramid fiber (PMIA). PPTA powder is a rigid chain polymer with a linear arrangement of molecular chains, which is highly symmetrical and regular. Due to the presence of conjugated benzene rings in its main chain, the molecular chain segments are not easy to rotate internally, presenting a linear rigid structure, giving the material high strength, high modulus, high temperature resistance and other characteristics. The quality of PPTA powder is the key to improving the quality of para-aramid products.

The global Fibre Grade Powder of Para-phenylene Terephthalamide market size was estimated at USD 1503.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.60% during the forecast period.
