Abstracts

Fibrin tissue adhesive is mainly composed of fibrinogen (containing coagulation factor XIII, fibronectin and appropriate aprotinin) and thrombin concentrate prepared from human plasma. When the two components are mixed, it simulates the end of the coagulation chain reaction. In one step, fibrinogen is gradually polymerized through the activation of fibrinogen by thrombin, and finally a fibrin solidified substance is formed, which plays a role of hemostasis and tissue adhesion before and after surgery. The global fibrin medical adhesive market refers to the market for medical adhesives that are derived from fibrin, a protein involved in the blood clotting process. Fibrin medical adhesives are used in various surgical procedures to promote hemostasis (stop bleeding) and enhance tissue sealing.

The global Fibrin Medical Adhesive market size was estimated at USD 2140.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
