Field computers, also known as rugged or portable computers, are specially designed devices that are used in rugged environments or outdoor settings. They are built to withstand harsh conditions such as extreme temperatures, moisture, dust, vibration, and impact. Field computers are commonly used in industries such as construction, agriculture, logistics, utilities, transportation, and public safety. Field computers are typically more durable and rugged than traditional laptops or tablets. They are often equipped with reinforced housings, protective screens, sealed ports, and fortified internal components to ensure their reliability in demanding conditions. These devices can handle rough handling, survive drops, resist water and dust ingress, and operate in different temperature ranges. The global field computers market refers to the market for rugged or portable computers specifically designed for use in the field or outdoor environments. This market encompasses the sales of hardware and software solutions that cater to the needs of various industries, such as construction, agriculture, logistics, utilities, transportation, and public safety, where fieldworkers operate in demanding conditions.
