Report Overview

Filler metals are materials used to join or fill gaps between metal workpieces during welding or brazing processes. They are typically available in the form of rods, wires, or powders and are selected based on factors such as the type of base metals being joined, the welding process used, and the desired mechanical properties of the final joint. Filler metals play a crucial role in ensuring the strength, integrity, and quality of welded joints in various industries such as automotive, construction, aerospace, and manufacturing.

The market for filler metals is experiencing steady growth due to several key market trends and drivers.
