Abstracts

The main function of the film biaxial stretching machine is to perform biaxial stretching on the film material. This stretching can be synchronous or asynchronous, depending on the type and configuration of the equipment. Through biaxial stretching, the film can form a certain molecular orientation in both the longitudinal and transverse directions, thereby improving the physical properties and processing performance of the film. Film biaxial stretching machines are widely used in plastic films, packaging materials, agricultural films, architectural films and other fields. Through biaxial stretching treatment, the tensile strength, tear strength, transparency, thermal stability and other properties of the film can be improved to meet the needs of film materials in different fields.

The global Film Biaxial Stretching Machine market size was estimated at USD 318.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.40% during the forecast period.
