Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Film Laser Cutting System competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A film laser cutting system is a precision processing solution designed for cutting thin films, foils, and flexible materials using high-intensity laser beams. It operates by focusing a controlled laser source—typically CO₂, UV, or fiber laser—onto the material surface, where the concentrated energy melts, vaporizes, or ablates the film along the programmed path. This non-contact cutting method ensures high accuracy, minimal thermal deformation, and clean edges, making it ideal for materials such as polyimide (PI), polyethylene terephthalate (PET), polyethylene (PE), and other polymer or metalized films. These systems are widely used in electronics manufacturing, packaging, display technology, and solar cell production, where micro-precision and material integrity are critical. In 2024, global film laser cutting system production reached approximately 12.44 k units, with an average global market price of around US\$ 17358 per unit. And global film laser cutting system production capacity reached approximately 16 k units. The average gross margin in this industry reached 28.74%. Upstream: The film laser cutting system industry depends on precision laser sources, motion control systems, optical components, and automation electronics. Core upstream materials include fiber or CO₂ laser modules, galvanometer scanners, high-transmission optical lenses, and linear guide rails. Manufacturing involves optical alignment, beam path calibration, and integration with vision systems to ensure micron-level cutting precision. Representative upstream suppliers include Coherent (laser sources), THK (motion and linear guide systems), and IPG Photonics (fiber laser modules). Upstream innovation focuses on shorter wavelength lasers for thin-film processing, enhanced cooling systems, and high-speed digital control for fine-edge

cutting and minimal thermal deformation. Downstream: Film laser cutting systems are widely used in industries such as electronics, packaging, display manufacturing, and automotive components, where they enable high-precision cutting of PET, PI, and other polymer films. They support applications like flexible circuits, optical films, and protective coatings. Representative downstream companies include Han's Laser (industrial laser systems), Trumpf (precision cutting equipment), and Foxconn (electronics manufacturing applications). With the expansion of flexible electronics and advanced display production, downstream demand is growing for high-speed, automated laser cutting systems featuring real-time vision correction, clean-edge control, and integration into smart manufacturing lines for superior productivity and material utilization.

The global Film Laser Cutting System market size was estimated at USD 216.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
