Abstracts

A film stress test system is a specialized analytical instrument used to measure and characterize internal or residual stresses within thin films and coatings, typically applied during manufacturing processes such as physical vapor deposition (PVD), chemical vapor deposition (CVD), or various coating techniques. These systems employ methods like X-ray diffraction (XRD), curvature measurement, or laser-based techniques to quantify stress, which is critical for assessing film adhesion, durability, and performance in applications spanning semiconductors, optoelectronics, biomedical devices, and protective coatings. The accuracy and reliability of these measurements help manufacturers prevent defects like delamination, cracking, or warping, ensuring product quality and longevity in high-precision industries.
