Structural adhesives: invisible but ubiquitous. Although metal fasteners must be widely used to achieve redundancy, structural adhesives are also necessary for many Aerospace bonding applications, whether in the fuselage and internal composites or between composites and metals. Adhesives also have unique functions in special applications and can be used as gaskets and surface films for lightning protection. Aircraft film structural adhesives are special adhesives used to bond film materials and structural components together during the manufacturing of aircraft and other aircraft. This adhesive needs to meet the stringent standards of the aerospace industry to ensure its performance stability and safety in high-altitude environments and extreme conditions. It usually needs to have the characteristics of light weight, high temperature resistance, low temperature resistance, chemical corrosion resistance, etc., to meet the requirements of aviation equipment. This adhesive plays an important role in aircraft manufacturing, where it is used to secure and join film materials to ensure the robustness and safety of aircraft structures
