## Abstracts

The Financial HPC Solution is a specialized computing architecture that integrates supercomputing, parallel processing, and low-latency networking technologies to address the real-time processing of massive amounts of data and the computation of complex models in the financial sector. This solution primarily supports core business scenarios such as high-frequency trading, risk quantification, derivatives pricing, portfolio optimization, and financial fraud detection. Its technical architecture typically includes large-scale GPU/FPGA computing clusters, high-speed interconnects such as InfiniBand, a distributed in-memory computing framework, and an optimized algorithm library, aiming to compress computational tasks that traditionally take hours to milliseconds or microseconds. By deploying this solution, financial institutions can achieve ultra-fast response to market fluctuations, conduct more refined full-scale risk stress testing, and develop more predictive robo-advisory models, thereby gaining speed and decision-making advantages in the fiercely competitive market while meeting increasingly stringent regulatory compliance requirements. This system has become an indispensable core technological infrastructure for modern financial institutions. Financial HPC solutions have been extensively applied in core business areas. In high-frequency trading, companies such as Virtu Financial use FPGA solutions to compress order latency to nanoseconds to capture tiny price discrepancies. Investment banks such as Goldman Sachs utilize GPU clusters for daily Monte Carlo simulations of trillion-dollar derivatives portfolios. Institutions such as JPMorgan Chase use thousand-core CPU clusters to complete bank-wide stress tests in a matter of hours. PayPal, on the other hand, relies on a real-time stream computing platform to achieve millisecond-level fraud detection and process over 10 billion transactions daily for risk control. These practices have significantly improved institutional decision-making speed, risk management capabilities, and operational efficiency.

The global Financial HPC Solution market size was estimated at USD 1430.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.40% during the forecast period.
