Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Fine Metal Mask (FMM) competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Fine Metal Mask (FMM) is a core precision consumable material used in the evaporation process of OLED (organic light-emitting diode) panel manufacturing. Its primary function is to precisely control the deposition position of organic light-emitting materials during the evaporation process through its pre-designed micron-level high-precision opening patterns on the surface, thereby forming the pixel array of the OLED screen. This directly determines the resolution, color uniformity, and imaging quality of the display panel. In 2024, global sales of fine metal masks (FMM) will reach 358,000 units, with an average selling price of US\$1,995 per unit. Market Overview: The FMM market currently exhibits a competitive landscape characterized by one dominant player and multiple strong competitors, with Japanese companies holding a dominant position. The core global FMM manufacturers include Dai Nippon Printing (DNP), Toppan Printing, and Darwin Precision, among others, with the top five manufacturers accounting for approximately 99% of the global market share. Japan is the largest production region, accounting for approximately 89% of the market share, followed by South Korea and China. The Asia-Pacific region is the largest market, accounting for approximately 99% of the market share, followed by North America and Europe. Development Trends: Size Scaling Up: As OLED panels transition toward larger sizes, FMM sizes are also trending toward larger dimensions. Major panel manufacturers are actively expanding into high-generation OLED panel production lines, such as 8th generation and above, which will significantly increase market demand for large-sized FMM. Precision refinement: As end-users demand higher display clarity, OLED screen PPI values continue to be updated, leading to higher precision requirements for FMM.

Thinner Invar raw materials (such as those below 25 microns) are needed to manufacture FMM to achieve higher pixel precision.

The global Fine Metal Mask (FMM) market size was estimated at USD 714.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 13.50% during the forecast period.
