Abstracts

Finishing auxiliaries are chemical substances used in the final stages of the manufacturing process to enhance the appearance, performance, and durability of textiles, metals, and other materials. These auxiliaries are applied after the pretreatment process and are aimed at improving various properties, such as colorfastness, water repellency, flame resistance, and anti-static properties. The finishing process involves the application of coatings, dyes, pigments, and other chemicals to the material surface. Finishing auxiliaries play a crucial role in facilitating the proper application and bonding of these substances to the material, resulting in the desired finish. There are various types of finishing auxiliaries available in the market, including softeners, antistatic agents, wrinkle-resistant agents, flame retardants, water repellents, and UV absorbers. Each type of auxiliary is designed to address specific finishing requirements and improve the overall quality and performance of the final product.
