Report Overview

A fire detection system is an electronic system that detects fires in their early stages and notifies building or site occupants of the fire. The system consists of various devices, such as smoke and heat detectors, that receive signals and respond to events generated by fire. The system also includes manual call points (break glass), so that people can alert others in case of fire. The purpose of the system is to allow for safe evacuation of personnel and, if possible, for a quick response to put the fire out.
