Abstracts

Fire-rated bi-fold doors are specialized architectural hardware designed to provide both functional space-saving operation and critical fire compartmentalization, constructed with fire-resistant materials such as steel, aluminum with intumescent seals, or composite cores, and certified to withstand fire for specified durations (e.g., 30, 60, or 120 minutes) while maintaining integrity, insulation, and stability under high temperatures, allowing them to be used in openings where traditional swinging doors are impractical due to space constraints, commonly installed in commercial, residential, and industrial settings such as hotels, apartments, hospitals, and warehouses to meet building code requirements for fire safety without sacrificing aesthetic flexibility or efficient use of floor area.
