Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Fire Retardant Fillers for Polymers competitive dynamics, regional economic interdependencies, and supply chain reconfigurations.Fire retardant fillers for polymers are inorganic compounds added to polymer materials to reduce their flammability and slow the spread of fire. The most widely used types include aluminum hydroxide (ATH) and magnesium hydroxide (MDH), along with other specialty mineral fillers. These fillers function through physical mechanisms such as endothermic decomposition and water release, which cool the polymer and dilute flammable gases. Aluminum hydroxide decomposes at approximately 200?C, making it suitable for lower-temperature processing, while magnesium hydroxide, which decomposes above 300?C, is ideal for high-temperature polymers. These fire retardant fillers are commonly used in plastics, rubber, synthetic fibers, adhesives, coatings, and composites.Market Overview
