Abstracts

Fire retardant laminates are composite materials that have been specially treated or formulated to resist the spread of fire and limit the release of flammable gases when exposed to a flame or high heat source. They typically consist of a base material, such as paper, fabric, or plastic, which is impregnated or coated with fire - retardant chemicals. These laminates are designed to slow down the combustion process, providing a crucial safety barrier in various applications such as in buildings (for wall panels, ceilings, and furniture), in the transportation industry (for vehicle interiors), and in electrical equipment enclosures to reduce the risk of fire and protect lives and property.
