## Abstracts

Fire safety systems for marine and offshore environments are critical for protecting lives and assets, given the unique dangers of being at sea. These systems, including high-pressure water mist and carbon dioxide systems, provide fast and effective fire suppression. High-pressure water mist systems use minimal water while controlling fires efficiently by releasing fine water droplets through specialized nozzles, protecting key areas like engine rooms and living spaces. Carbon dioxide systems are also widely used for fire suppression in enclosed spaces. Both technologies ensure maximum safety for passengers and crew while minimizing damage and downtime.

The global Fire Safety Systems for Marine and Offshore market size was estimated at USD 306.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
