Abstracts

Fire stopping silicone is a specialized type of silicone sealant engineered to prevent the spread of fire, smoke, and toxic gases through joints, penetrations, and gaps in building structures, particularly in walls, floors, and ceilings where pipes, cables, ducts, or other services pass through. It expands under heat exposure to form an intumescent char, effectively sealing off openings to maintain the fire-resistance rating of compartmentalized areas. This product is distinct from general-purpose sealants due to its formulation with fire-retardant additives and its compliance with stringent international building and fire safety standards, such as UL certifications, EN standards, and regional building codes, ensuring it performs reliably in the event of a fire to protect lives and property.

The global Fire Stopping Silicone market size was estimated at USD 650.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.15% during the forecast period.
