Report Overview

Fire suppression systems are used to extinguish or prevent the spread of fire in a building. Suppression systems use a combination of dry chemicals and/or wet agents to suppress equipment fires.

Europe accounted for largest market share for fire suppression system owing to stringent government rules and regulations supporting the installation of fire protection system in buildings. Stringent fire safety norms in Norway and UK have also pushed offshore oil and gas operators in the region to increase their investment to improve fire safety arrangements. Asia Pacific contributed to a significant market share owing to considerable growth in building infrastructure and rising investment in offshore development in the region. In addition, rising industrialization in emerging economies like India and China coupled with significant number of floating liquefied natural gas vessels proposed to be setup in Australia is expected to augment the global market for fire suppression system over the forecast period. Increasing oil and gas projects in Brazil and West Africa coupled with preplanned offshore projects initiated by governments of several economies is expected to augment global fire suppression system market growth.
