Abstracts

Fireproof silicate boards are high-performance, non-combustible building materials made primarily from calcium silicate, reinforced with fibers to enhance mechanical strength and thermal insulation. These boards are inherently resistant to fire, capable of withstanding temperatures above 1000°C without losing structural integrity. Unlike traditional fire-retardant panels, silicate boards do not burn, emit toxic gases, or deform under extreme heat, making them ideal for passive fire protection. Common applications include wall linings, fire doors, ducts, ceiling systems, and compartment barriers in commercial and industrial buildings. Fireproof silicate boards are also moisture-resistant, mold-proof, and dimensionally stable, making them suitable for high-humidity or outdoor environments. Their performance is often certified to stringent standards such as EN 12467 or ISO 5660.

The global Fireproof Silicate Boards market size was estimated at USD 56.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.70% during the forecast period.
