Report Overview

The fireworks gas bottle is a metal stamping part that is welded and processed into one body by the bottle shell part and the bottle cap part. It is specially used for weddings, opening ceremonies and other occasions, and is safer and more civilized than traditional firecrackers. Fireworks cylinders are filled with high-pressure liquefied gas, usually flammable gases such as propane or butane. When using it, you need to connect the gas cylinder to the ignition device and open the valve. After ignition, the high-temperature and high-pressure gas generated by gas combustion will push the fireworks out, achieving the purpose of lifting the fireworks into the air.
