Abstracts

A fisheye conversion lens is an optical accessory designed to attach to the front of a camera's primary lens, enabling it to capture ultra-wide-angle images with a distinctive hemispherical or spherical distortion effect. These lenses are characterized by their extreme field of view—often 180 degrees or more—which intentionally bends straight lines and exaggerates perspectives, creating a signature rounded, immersive visual style. They are commonly used in photography and videography to achieve creative, dynamic shots in genres such as action sports, real estate, astrophotography, and artistic projects, offering an affordable alternative to dedicated fisheye prime lenses while maintaining compatibility with a range of camera systems.

The global Fisheye Conversion Lens market size was estimated at USD 45.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.
