### Report Overview

The 5-diff blood cell analyzer is an analytical instrument used in the fields of clinical medicine and sports science, and refers to the five-differentiation examination of white blood cells. These five types of white blood cells include neutrophils, eosinophils, basophils, monocytes, and lymphocytes. Each cell has a different absolute value and percentage. If the number of these five cells exceeds or falls below the normal range, it has different pathological significance. The five-differentiation blood cell analyzer can count and analyze the five types of white blood cells separately, which is helpful for the judgment, diagnosis and treatment of diseases clinically.
