Abstracts

A fix speed peristaltic pump is a type of positive displacement pump designed to deliver a consistent, non-adjustable flow rate by compressing and relaxing a flexible tube through a set of rotating rollers or shoes in a fixed, unchanging motion. Unlike variable-speed models, these pumps maintain a constant operational speed, making them suitable for applications where a steady, repeatable fluid transfer is required without the need for flow adjustment. They are valued for their ability to handle sensitive, corrosive, or sterile fluids since the fluid only contacts the tubing, minimizing contamination risks and simplifying maintenance through easy tube replacement.

The global Fix Speed Peristaltic Pump market size was estimated at USD 350.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
