Abstracts

The development trend of fixed dental radiography systems is focused on improving image quality, reducing radiation exposure, increasing efficiency, and enhancing patient comfort. The shift from traditional film-based radiography to digital radiography has been a significant trend. Digital systems offer higher image resolution, immediate image availability, and the ability to enhance and manipulate images for better diagnosis. CBCT technology has gained popularity in recent years due to its ability to provide three-dimensional images of the oral and maxillofacial region. This technology allows for more accurate diagnosis and treatment planning, especially for complex cases such as dental implants and orthodontics. Manufacturers are continuously working on developing systems that emit lower levels of radiation while maintaining image quality. This is achieved through advancements in sensor technology, image processing algorithms, and optimized exposure settings.

The global Fixed Dental Radiography System market size was estimated at USD 2268.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.10% during the forecast period.
