## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Fixed-Focus UV Lens competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production of Fixed-Focus UV Lens reached approximately 78,000 units, with an average selling price of approximately US\$1,800 per unit. The single-line production capacity is approximately 3,500 pieces/year, with an average gross profit margin of approximately 25-40%. Fixed-Focus UV Lens is fixed-focal-length lenses designed and manufactured specifically for operation in the UV band and lack a zoom function. These lenses are capable of penetrating and focusing UV light, and offer high resolution and stable image quality. Due to their unique optical design, fixed-focus UV lenses are widely used in fields requiring UV imaging, such as materials testing, biomedical imaging, and forensics. The upstream supply chain for Fixed-Focus UV Lens focuses on the purification and substrate manufacturing of specialty optical materials such as high-purity UV-grade fused silica and calcium fluoride crystals, as well as the research and development and production of precision coating materials such as evaporation materials and sputtering targets. Downstream, fixed-focus UV lenses directly connect to the manufacturing of complete equipment such as UV lasers, photolithography machines, fluorescence detectors, semiconductor defect detection equipment, and high-end medical devices. Ultimately, these lenses are used in end-use applications such as precision industrial manufacturing, cutting-edge scientific research, and biomedical diagnostics.

The global Fixed-Focus UV Lens market size was estimated at USD 140.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.20% during the forecast period.
